3.2 Demand for loans to households 9

APPENDIX 11

Introduction

The results of the Bank Lending Survey refer to changes in the third quarter of 2026 and expectations for the fourth quarter of 2026. The total of eight banks from Bosnia and Herzegovina were surveyed, constituting a representative sample selected on the basis of asset size and territorial representation.

1. General information

The Survey questionnaire contains 16 standard questions about realised and expected changes on the supply and demand of loans: 12 questions refer to realised changes and 4 questions to future changes. The questions cover three categories of loans: loans or credit lines to corporates, housing loans to households, and consumer and non-purpose loans to households. For all the three categories, questions are asked about the credit standards that apply to loan approval, then about changes in loan approval terms, demand for loans, factors affecting the supply and demand for loans, as well as the percentage of rejected loan applications. Survey questions are generally formulated in terms of changes in the last three months and the expected changes in the next three months. Survey participants are asked to qualitatively indicate the degree of tightening or easing (for standards and terms) or the degree of reduction or increase (for demand), using the following five-point scale to report changes: (1) significant tightening /decrease, (2) moderate tightening/decrease, (3) basically no change, (4) moderate easing/increase or (5) substantial easing/increase.

The individual answers of the banks participating in the Survey were compiled and processed in order to provide a picture of the entire banking sector in Bosnia and Herzegovina.

The results of the Survey are presented in the form of a net percentage. The net percentage for the answers to questions about credit standards is defined as the difference between the sum of the shares of banks that answered that credit standards have been "substantially relaxed" and "moderately relaxed" and the sum of the shares of banks that answered that they have been "significantly tightened" and "moderately tightened".

A negative value of the net percentage indicates that the majority of banks have tightened credit standards ("net tightening"), while a positive value of the net percentage indicates that a majority of banks have relaxed credit standards ("net easing").

Likewise, the term "net demand" refers to the difference between the percentage of banks that answered that there was an increase in demand and the percentage of banks that answered that there was a decrease in demand for loans. Net demand will therefore be positive if a larger share of banks reported an increase in loan demand, while a negative net demand indicates that a larger share of banks reported a decline in loan demand.

In addition to the "net percentage" indicator, the CBBH also publishes the "diffusion index" as an alternative measure of banks' responses to the questions related to changes in credit standards and net demand. The diffusion index is constructed as follows: if the respondent answers "significantly", the answers are assigned a numerical value of 1, which is twice the value assigned to the answers "to a certain degree" (score 0.5). The interpretation of the diffusion index follows the same logic as the interpretation of the net percentage.

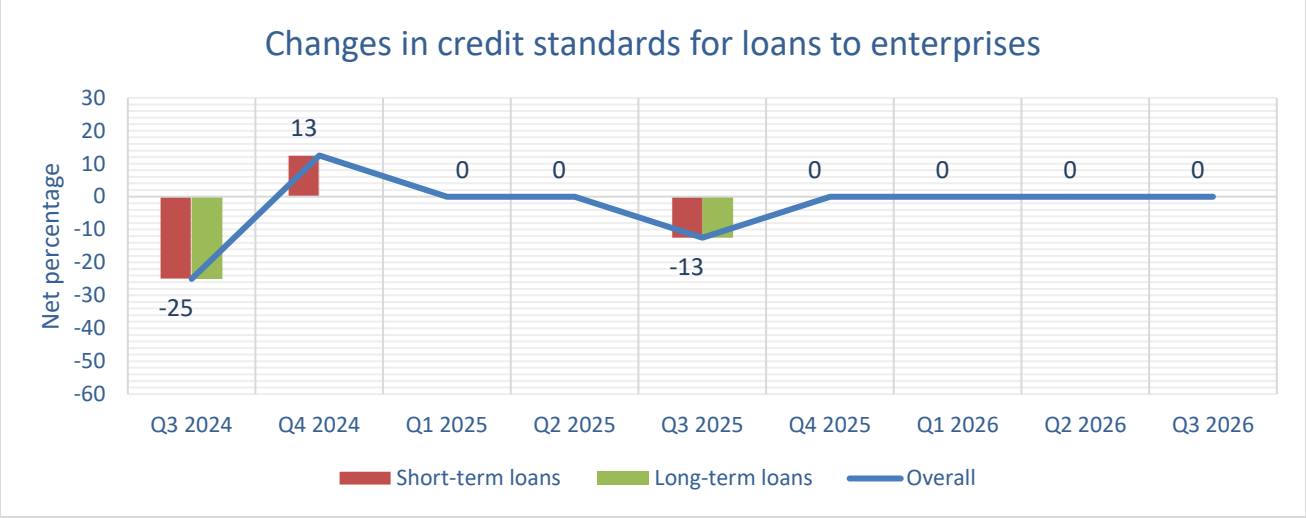

2. Corporate loans

2.1 Supply

2.1.1 Credit standards for corporate loans

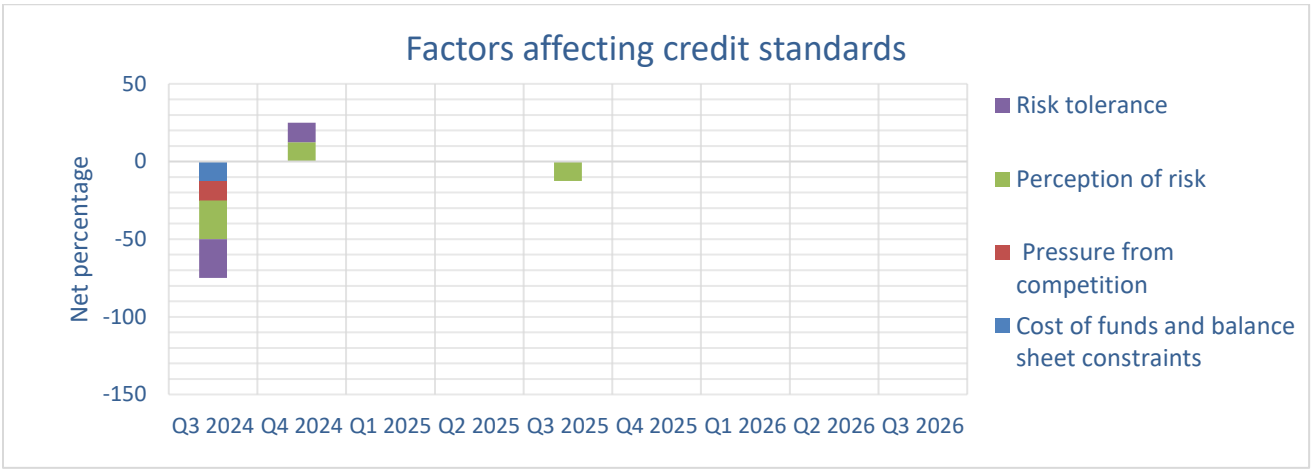

On the basis of the results of the conducted Bank Lending Survey, trends of credit standards for corporate loans in the third quarter of 2026 were analysed.

The Survey results show there were no changes of credit standards for approving corporate loans in the third quarter of 2026, the same as in the previous quarters (see Appendix, question 1).

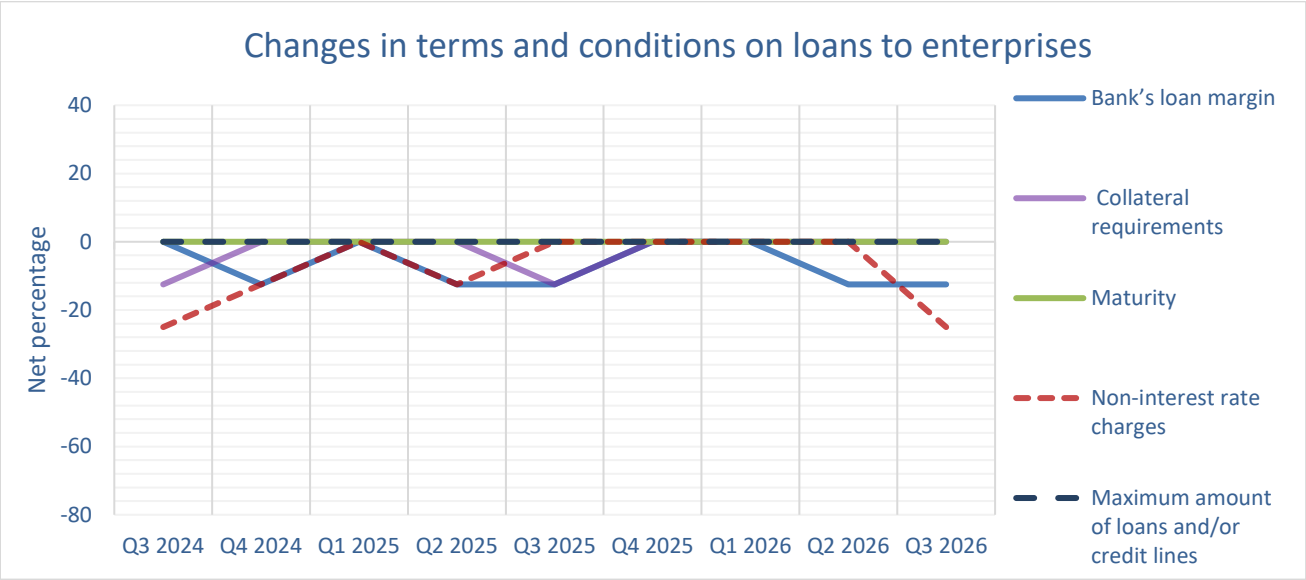

** The net percentage does not measure the intensity of the change. A lower (higher) value of the net percentage shows that a larger number of banks tightened (eased) credit standards compared to the previous quarter. In all Graphs, the comparison is made in relation to the previous quarter.*

The graph below shows the net percentage of contributions of factors which impacted a change of credit standards of banks applied in the process of approving loans and/or credit lines to corporates. In the periods when there were no changes of credit standards, the net percentage of contributions of individual factors was 0% (see Appendix, question 2).

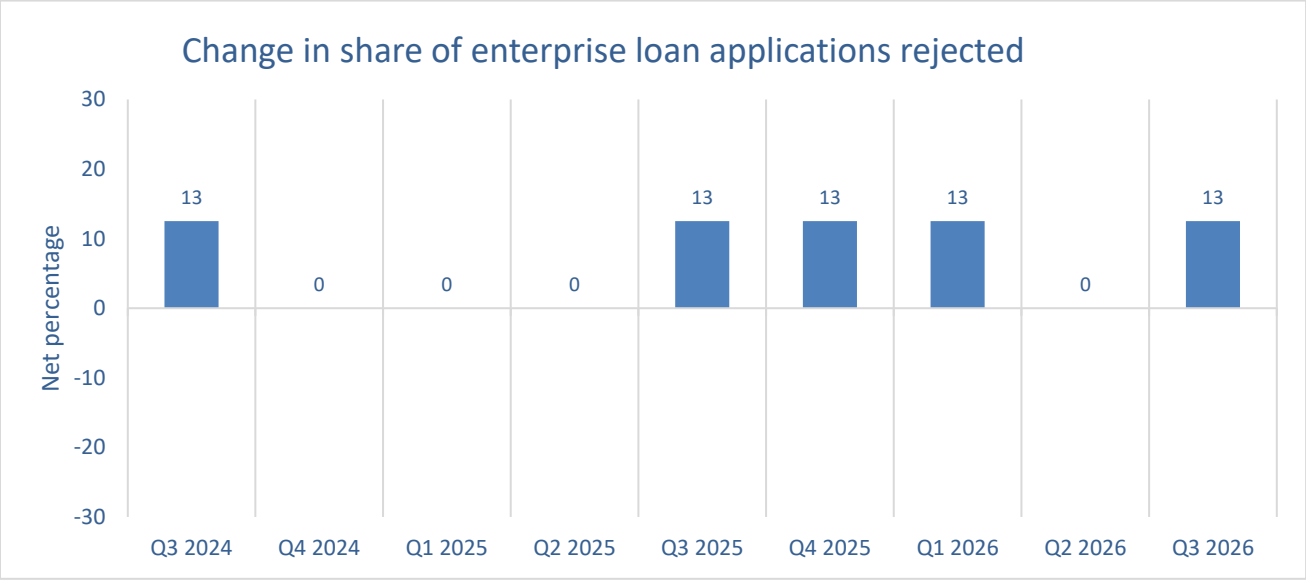

2.1.2 Terms and conditions of approving the corporate loans

Regarding the terms of approving the corporate loans in the third quarter of 2026, interest margin and commissions and fees had the net tightening effect, while requirements related to collateral, maturity and maximum loan amount remained the same compared to the previous quarter (see Appendix, question 3).

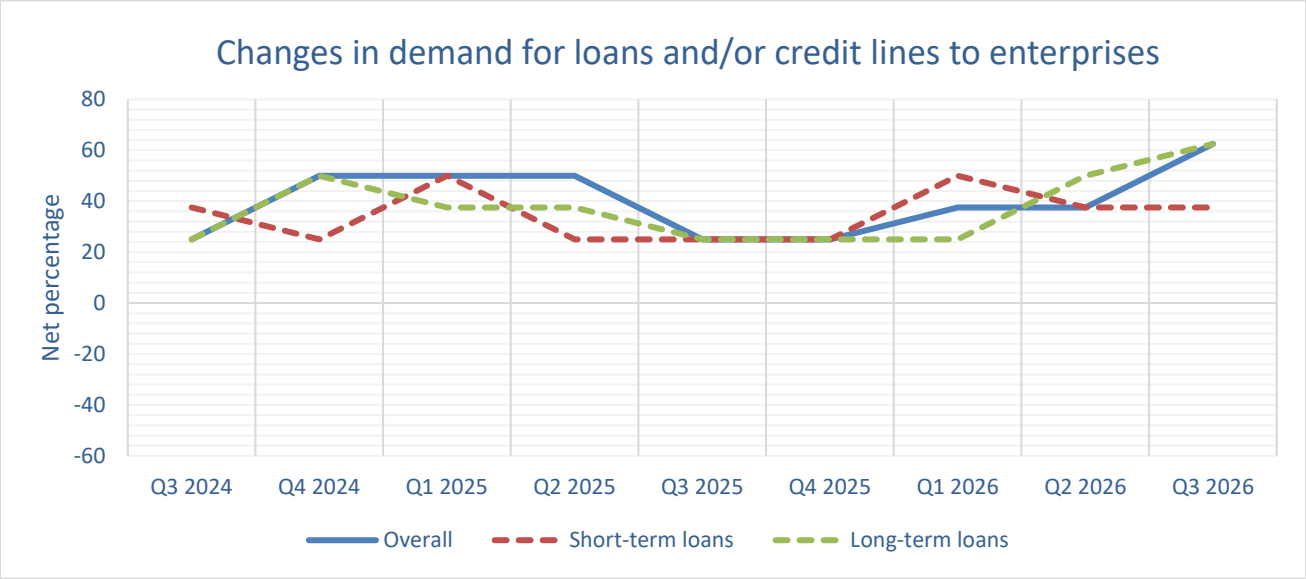

2.1.3 Share of rejected applications for corporate loans

In the third quarter of 2026, the net result from compiled responses shows that there has been an increase of the share of rejected applications for loans to enterprises compared to the previous quarter (see Appendix, Question 4).

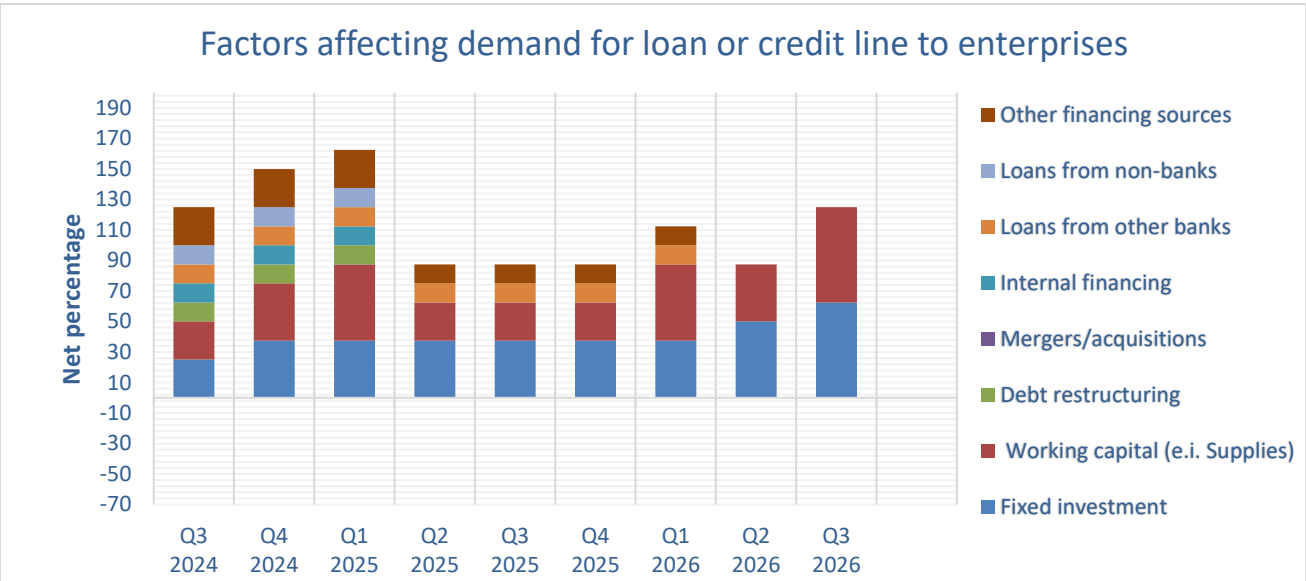

2.2 Demand for corporate loans and/or credit lines

On the basis of the results of the conducted Bank Lending Survey, trends of corporate demand for loans in the third quarter of 2026 and also the factors impacting the trend were analysed. The Survey results show that corporate demand for loans continued to grow in the observed period. By maturity, the growth of demand was recorded both in the segment of short-term and the segment of long-term loans, with the growth observed in the segment of long-term loans being slightly stronger (see Appendix, question 5).

The graph below shows the net percentage of the contributions of factors that influenced the change of the corporate demand for loans and/or credit lines (see Appendix, question 6).

Expectations for the fourth quarter of 2026

On the basis of the results of the conducted Bank Lending Survey, expectations related to the trend of credit standards and corporate demand for loans in the fourth quarter of 2026 have been analysed.

The Survey results show that the standards for approving corporate loans are expected to remain unchanged in the fourth quarter of 2026 (see Appendix, Question 7).

At the same time, the Survey results show expected increase of the corporate demand for loans in the period to come. Majority of banks are expecting a growth of demand for long-term loans compared to short-term loans (see Appendix, question 8).

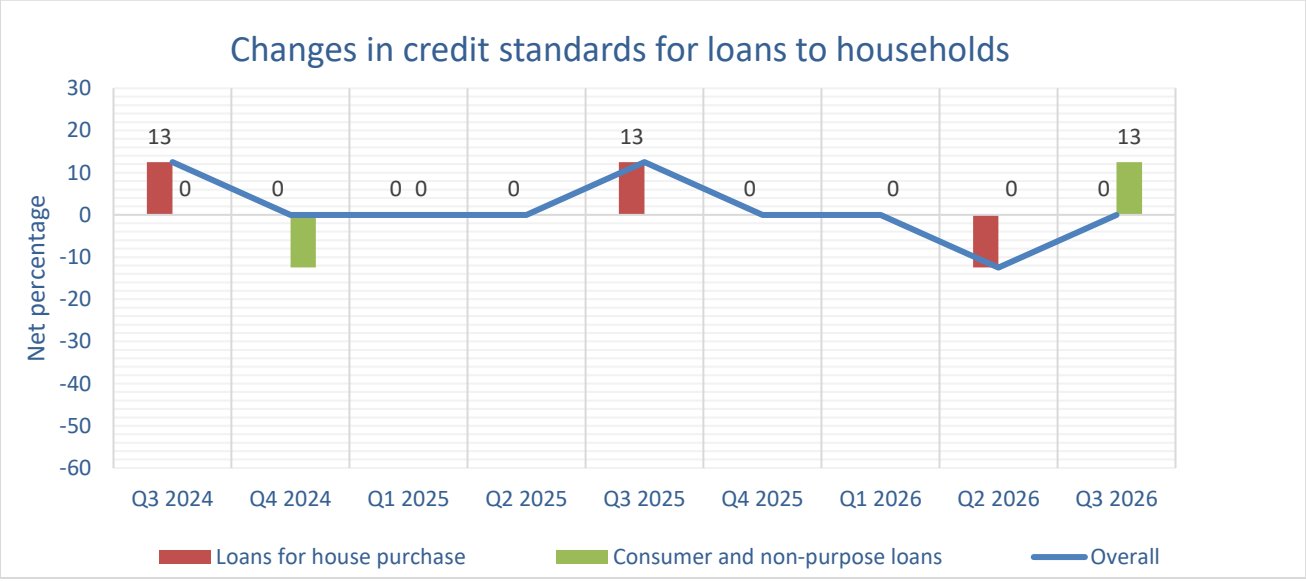

3. Loans to households

3.1 Supply

3.1.1 Credit standards for loans to households

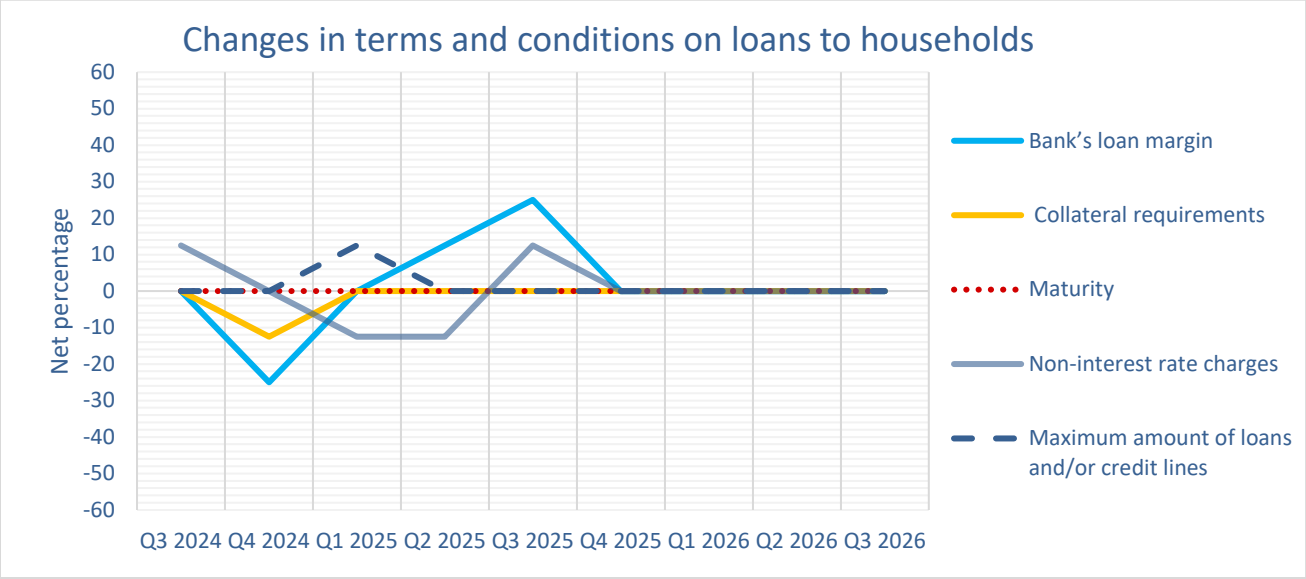

In the third quarter of 2026, Bank Lending Survey was conducted, with analysis of credit standards trend for household loans and factors impacting possible standard changes.

The Survey results indicate the easing of the credit standards for consumer and unspecified purpose loans to households in the observed period, which was affected by the redesign of credit rules for approving loans. At the same time, standards for approving housing loans remained unchanged compared to the previous quarter (see Appendix, question 9).

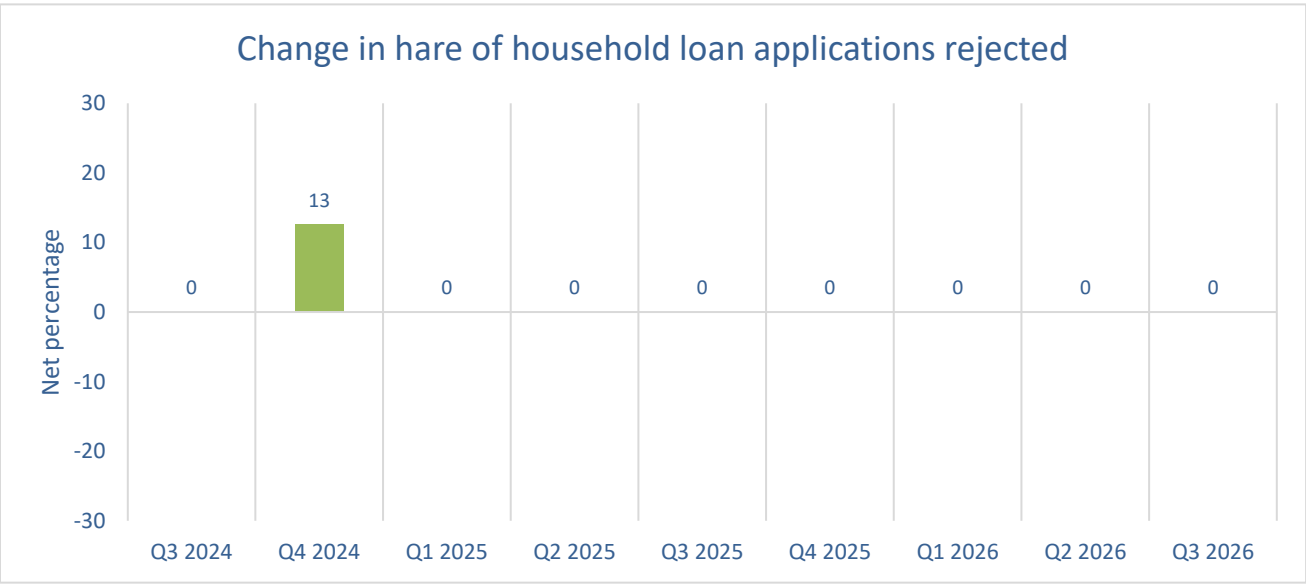

3.1.2 Terms and conditions of approving loans to households

The terms and conditions on loans to households in the third quarter of 2026 remained unchanged, which indicates continuing application of the existing loan terms and conditions, without their additional tightening or easing (see Appendix, question 11).

3.1.3 Share of rejected applications for loans to households

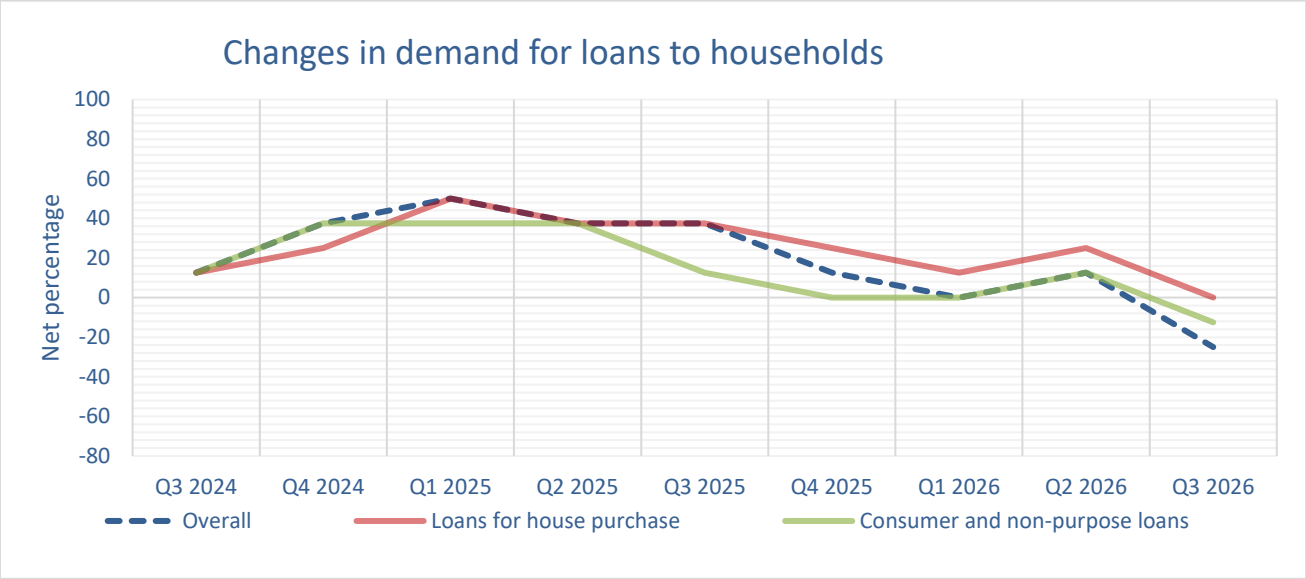

In the third quarter of 2026, the net result from compiled responses indicates that there was no change of the share of rejected applications for approval of loans to households compared to the previous quarter (see Appendix, question 12).

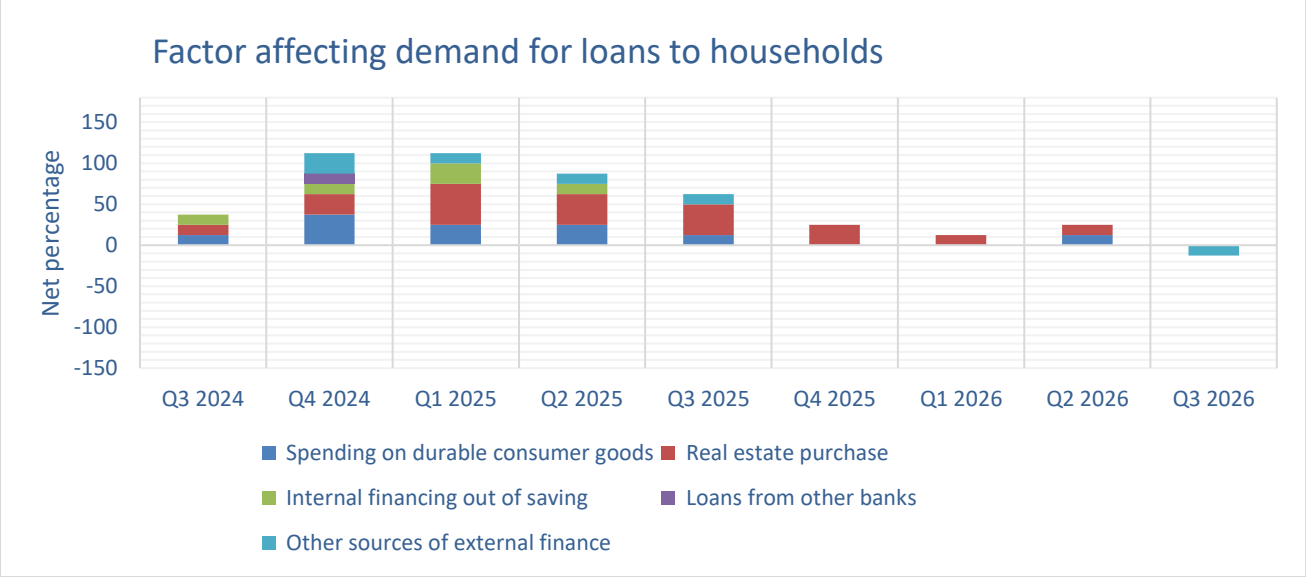

3.2 Demand for loans to households

On the basis of the results of the conducted Bank Lending Survey, trends of household demand for loans in the third quarter of 2026 and also the factors impacting the trend were analysed.

The Survey results show that household demand for consumer and non-specified purpose loans in the third quarter of 2026 decreased, while demand for housing loans remained unchanged compared to the previous quarter (see Appendix, question 13).

The graph below shows the net percentage of the contributions of the factors that influenced a change of demand for loans to households (see Appendix, question 14).

Expectations for the fourth quarter of 2026

On the basis of the results of the conducted Bank Lending Survey, expectations related to credit standards and household demand for loans in the fourth quarter of 2026 have been estimated.

The Survey results show that the net percentage of responses with regard to standards for approving household loans is indicating the expected easing of credit standards for approving housing loans in the fourth quarter of 2026 (see Appendix, Question 15).

At the same time, the Survey results indicate the expected decrease of household demand for housing loans in the fourth quarter of 2026 (see Appendix, question 16).

APPENDIX

Consolidated answers of banks for the third quarter of 2026, related to the questions from the Survey questionnaire

I. Loans or credit lines to corporates

1. Over the past three months, how have your bank's credit standards as applied to the approval of loans and/or credit lines to corporates, changed?

(in per cents)

Periods	Overall		Short-term loans		Long-term loans	
	Net percentage	Diffusion index	Net percentage	Diffusion index	Net percentage	Diffusion index
Q3 2022	-29	-21	-29	-21	-43	-29

12. Over the past three months (apart from normal seasonal fluctuations), has the share of household loan applications, that were completely rejected by your bank decreased, remained unchanged or increased compared to the total number of loan applications of households?*

(in per cents)

Periods	Share of rejected applications	
	Net percentage	Diffusion index
Q3 2022	14	7
Q4 2022	0	0
Q1 2023	0	0
Q2 2023	25	13
Q3 2023	25	13
Q4 2023	13	6
Q1 2024	13	6
Q2 2024	0	0
Q3 2024	0	0
Q4 2024	13	6
Q1 2025	0	0
Q2 2025	0	0
Q3 2025	0	0
Q4 2025	0	0
Q1 2026	0	0
Q2 2026	0	0
Q3 2026	0	0

** Since the second quarter of 2021, there were changes in the analysis of the share of rejected loan applications, compared to previous quarters. Instead of the number of rejected loan applications, an information on the change of the amount of rejected loans applications during the observed quarter is provided.*

13. Over the past three months (apart from normal seasonal fluctuations), how has the demand for households loans changed at your bank?

(in per cents)

Periods	Overall		Housing loans		Consumer and non-purpose loans	
	Net percentage	Diffusion index	Net percentage	Diffusion index	Net percentage	Diffusion index
